

The DNA strategy

The basis for more efficiency and security of your information.

“We know that every company has its own DNA. Do you?”

Markus Schäfer, Managing Director SECURisk

SECURisk develops concepts for the protection of your corporate DNA, because, when it comes to information, you should not leave anything to chance.

These days, every company and every organisation that makes use of new technologies, is highly dependent on its information systems and the infrastructure available. Considerable data volumes are digitally stored and essential work processes are electronically controlled. Regardless of the company size, this data as well as its software and hardware form the foundations of your success – or as we call it: your corporate DNA. On the one hand, the protection of your corporate DNA is to prevent unwanted access or impacts from outside. On the other hand, it is important to adapt the individual components to your requirements and company objectives. Our aim is to show you the best possibilities to protect and

optimise the DNA of your organisation, and increase efficiency. If required, we will also accompany you during the implementation. We are convinced that there is an individual, ideal DNA concept for each company, each organisation. Therefore, we accurately coordinate the most important components after an in-depth analysis. Our services are oriented towards companies, authorities and organisations of all sizes. And of course also those having very special requirements for data management, data storage and data security.

The cornerstones of SECURisk are based on strategy, security and efficiency.

SECURisk DNA model

Together we develop individual solution components for the DNA of your IT requirements.

Customer DNA

“Where and how is it best to keep your data safe? We analyse your corporate DNA.”

Marc Wilkens, Competence Center for Energy Efficiency and Certifications

Strategy

With passion and competence, we develop the optimum strategy to make your corporate information and data more secure all around, and advance efficient and energy-optimised operations.

Initially, this objective requires the right strategy to implement information technology in a target-oriented and economical manner. In order to develop this, we analyse your current corporate DNA and determine whether this is consistent with your work processes, business goals and future visions. According to requirements we carry out e.g. make or buy studies, provide market analyses and develop outsourcing

strategies. Based on the results of these analyses, we develop a target-oriented action plan, which is specially tailored to your current and future requirements, and gets the best out of your corporate DNA.

Is your corporate information protected against external access? Is your data stored in an energy-efficient manner? In which areas could you achieve a certification?

SECURisk answers essential questions with regard to IT and information security and accompanies you in the realisation of the jointly developed strategy.

“The success of the SECURisk consultants is based on their passion and dedication to the requirements of the customers. Each staff member is a real specialist in their field of competence. We feel confident of the knowledge of the company, and place importance on a long-term companionship with Data Center Group for the optimisation of our strategy and security.”

Kai Wenzke | Head of Department Data Center | QITS GmbH, 40880 Ratingen, Germany

The most important components of the DNA analysis and strategy:

- Market analysis
- Risk analysis and management
- Make or buy study
- Information security strategy
- Outsourcing strategy
- Decision making concept
- Operational model
- IT strategy

Security

The security of your corporate DNA has top priority. Numerous risk factors could impede flawless IT processes or even damage data. House fires or natural disasters are tangible, conceivable risks, which companies protect themselves against.

Yet, since the revelations of Edward Snowden, an awareness of the sensitivity of data has emerged: information theft and misuse are crimes, which lead to massive effects on a company and its stakeholders. From associations to small and medium-sized companies to large groups, whether energy provider, construction company or hospital – data protection and information security affect everyone.

Therefore, it is our objective to arm your organisation against possible dangers, without losing sight of economic viability and efficiency.

Our team reveals unforeseen security gaps, assesses risks realistically, for example in relation to information theft, and develops effective security concepts to protect your sensitive data against any danger at its best. Where is there a need for action? Which investments are sensible and which are not?

For this purpose, all three dimensions of security are always examined: physical, (IT) technological as well as organisational and process-related.

With a target-oriented solution and a transparent investment overview from SECURisk, you are best prepared to make well-grounded investment decisions regarding security measures for your corporate DNA – **because prevention is better than cure.**

SECURisk offers the following security components for your success:

- Certification according to ISO/IEC 27001 and EN 50600
- BSI*] IT-Grundschutz
- Penetration test
- Security concept
- Service continuity management
- Data protection
- Cloud security

With our service continuity management you are protected at all times. Find out more online or call us.

Take the opportunity to become certified by us in accordance with ISO/IEC 27001 or BSI*] IT-Grundschutz as well as EN 50600.

Efficiency

Resources are limited. The better their use is planned, the more efficiently the business processes will run. In this case efficient not only means saving money in the short term, but also working in an economically optimal way in the long term. Therefore, our service includes determining the economic and energetic efficiency of your IT organisation. Our specialists find weak points and localise hidden potential in your corporate DNA. We develop individual solutions

to eliminate inefficient factors, and present you with possibilities to exploit your potential to the max.

SECURisk not only develops strategies to minimise risks, but also to maximise efficiency. Apart from increasing energy efficiency and process optimisation, we would like to give you the tools to equip you for the future: training your employees or CEO/CIO coaching are also included in our service portfolio.

“The competent consultation with SecuRisk GmbH with regard to the future orientation of our IT and data center strategy was the first important cornerstone for more efficiency and economic viability of our whole infrastructure.”

Stefan Nitsche | Area Manager Energy Industry | Information technology of Stadtwerke Speyer, Germany

Increase the efficiency of your corporate DNA with our services:

- Energy efficiency
- Blue Angel environmental label for energy-efficient data center operations
- Process optimisation
- Financing models
- ITIL/IT service management
- Maturity check
- Training sessions
- CEO/CIO coaching

Components for the optimisation of your company DNA increase your efficiency.

It is our role and our passion to protect the heart of your company and work out optimisation possibilities to increase efficiency. We at SECUrisk do not see ourselves as an external service provider, but rather as part of your team. As your strategic partner, we develop an individual solution for your optimum corporate DNA.

With the comprehensive consulting of SECUrisk, you are best prepared for existing and future IT requirements. We analyse, recognise and assess risks and potentials, independently and objectively, to

be able to present you with the best decision making concept. Our interdisciplinary team of specialists for safety, business processes, IT and economy provides the necessary expertise to create complex structures and ensure security and market stability of your organisation.

The components of strategy, security and efficiency are individually adapted to your requirements. If you like, we accompany you all along this process, to make your corporate DNA resistant and (cost-)efficient in the long term.

“We specialise in recognising and evaluating threats and risks.”

Hans-Jürgen Grabe, Competence Center for Information Security

The eight competence fields of SECURisk:

1 Information security

2 Data Center infrastructure

3 Strategy & processes

4 Information technology

5 Energy management

6 Energy efficiency & certifications

7 Legal services & data protection

8 Academy

“We realise and optimise your data center with services from A to Z as well.”

Ralf Siefen, Managing Director DC-Datacenter-Group GmbH

One for all. You can obtain the extensive range of services for comprehensive IT protection from the DATA CENTER GROUP.

With its five affiliates, DATA CENTER GROUP combines the complete competence for the security of your IT under one roof. From consulting and planning to correct structural implementation and extensive support and service, right up to professional operations of the data center.

To achieve this goal, the five companies in DATA CENTER GROUP work closely together and in coordination with each other. We create immense added value for the market, through continual knowledge transfer combined with short paths and a multitude of practical knowledge.

Apart from SECURisk, **proRZ Rechenzentrumsbau** is also available to our customers, for the realisation,

optimisation and construction of data centers of all sizes.

RZingcon is responsible for the architecture and overall general or partial planning (even on a HOAI*) basis) of data centers or high-tech building equipment, within DATA CENTER GROUP.

In order to comply with executives' requirements for the availability of IT systems, **RZproducts** produces unique products with an immense added value for the IT infrastructures of our customers, e.g. security rooms/safes and effective monitoring systems for supervision of IT components and control of energy efficiency.

*] HOAI is the German binding Fee Structure for Architects and Engineers

The range of DATA CENTER GROUP is completed by the services of **RZservices**. Professional maintenance and repairs by qualified and certified specialists combined with customer-oriented alarm and energy management guarantee high availability and cost-efficient IT operations. The service portfolio is completed by highly professional operational concepts for customers who want an in-house service provider.

The advantage for our customers: one single contact person for economical and efficient realisation and operations of the data center.

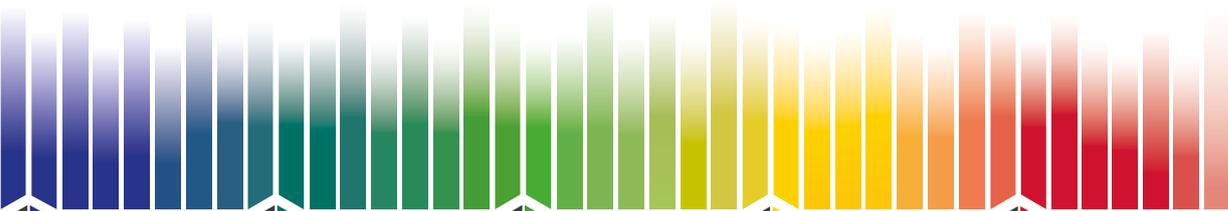

The five affiliates of DATA CENTER GROUP have one thing in common: we want what is most secure and most economical – i.e. the best possible IT infrastructure for our customers. It is our highest claim that we comply with individual requirements, and generate real added value for our customers in the long term!

We protect IT.
